

Location: Condominium Complex. Ashland, Massachusetts.

Date: January 10, 2003 9:00 AM

Conditions: Light dusting of snow has fallen. Surface temperature is 10° F. Snow contractor has applied sand/salt mix.

- 1) Due to the cold temperature the sand/salt mix has little or no effect on this dusting of snow. Notice the cars to the left and the dumpster area. The sun is shining on these areas and still no melting is evident.**
- 2) The possibility of a slip and fall is very high as people start to walk to their vehicles.**
- 3) The contractor did his job by spreading sand/salt mix. The contractor will bill his customer for this application of material, which did not produce favorable results.**
- 4) The sand will be an added expense to clean up in the spring.**
